### USAGE DATA SHEET

#### **PRODUCT: ACICLEAN**

**APPLICATIONS:** For removing cement and mortar splashes from brickwork, cleaning new brickwork, removing manganese staining (dark brown), and iron staining (brown) from brickwork and cleaning cast stone. Can also be used for the removal of Limewash.

#### **METHOD OF USE:**

**Preparation:** Aciclean may be used undiluted, direct from the container, or may be diluted with water at the rate of one part Aciclean with up to eight parts water, depending on the application. Effective cleaning and stain removal can often be achieved with the product diluted as specified, while removal of cement, limewash, mortar splashes or residues will usually require treatment with undiluted product. Always do a small test area first using Aciclean diluted. If the product appears to be affecting the surface, rinse off with plenty of water and experiment with a more diluted mixture. Protect or mask with waterproof masking tape, polythene sheeting or peelable coatings any areas or materials which could be damaged by the product. (See Caution Notes below).

**Application.** Thoroughly wet the surface. If there are deposits of loose dirt, these must be removed before applying the product. Sooty or greasy deposits (e.g. from traffic) may require the use of an alkaline cleaner. Apply Aciclean with a brush to the previously wetted surface. After not less than 10 minutes and not more than 30 minutes brush the surface well with a non-metallic brush and then rinse off thoroughly using a pressure-washer. (Please exercise caution when using high pressure on soft substrates to avoid damage to the surface.) Do not allow the applied chemical to dry before rinsing. If this happens, apply another coat of the product before attempting to clean off the surface. Further applications may be required. Coverage: 0.25 - 0.3 litres per sq. m.

**CAUTION:** This product is acidic. Take great care if attempting to use it to clean limestone and other acid-soluble stones. Do not use Aciclean to attempt to remove vanadium stains (green) from brickwork. Aciclean may darken some lighter coloured types of calcium silicate bricks. Will mark but not dissolve paintwork and some plastic finishes. Will etch metals and damage enamel surfaces. Only mix or put Aciclean in plastic containers.

**STORAGE:** Store in a cool, dry and secure place.

**HEALTH AND SAFETY:** Suitable impervious protective clothing must be worn when handling or using the product.

**For full health and safety information see Health and Safety Data Sheet for this product, available upon request.**
